

## ABSTRACT

1

2

3 An electronic assembly comprising an image transfer  
4 device for reading and transferring an image from a first  
5 medium, and a computer. The image transfer device  
6 includes a reader for reading the image on the first  
7 medium, and a display for displaying an image transfer  
8 menu for affecting transfer of the image. The computer  
9 is removably connected to the image transfer device.  
10 When the image transfer device is not connected to the  
11 computer, the image transfer device has a first type of  
12 the image transfer menu available for display on the  
13 display of the device. When the image transfer device is  
14 connected to the computer, the transfer device has a  
15 second type of the image transfer menu available for  
16 display on the display of the device. The second type of  
17 menu includes enhanced features for operating the image  
18 transfer device which transparently use the computer  
19 processor and memory to effect an image transfer  
20 according to the enhanced features.
